Adult Cases of Osteosarcoma and Dedifferentiated Chondrosarcoma

I would like to know how many adult cases of osteosarcoma and dedifferentiated chondrosarcoma Belfast trust have managed in the past 20 years. If this could be broken down by age 18-30 etc that would be ideal. I appreciate you may not hold records for the entire time, but as much information as possible would be greatly appreciated.

Adult Osteosarcoma 2008-2022

Age 16-39 **N=<5**

Age 40-69 **N=5**

Age ≥ 70 **N=11**

Adult Chondrosarcoma dedifferentiated 2008-2022 **N=5***

**We are unable to provide an exact figure by age band where numbers are very low. To provide this level of information would reduce numbers to discoverable limits where the patients could be identifiable.*

This is exempt from release under section 40(2) Personal Information relating to a third party, of the FOI Act.

Disclosure would constitute a breach of the principles of the Data Protection Act 2018.
