Software System for Recording and Management of Patient Radiation Dose

I am writing to you under the Freedom of Information Act 2000 to request the following information from your organisation.

- 1. Do(es) your hospital(s) have a software system capable of patient radiation dose recording and management in radiology? (Note: this could be a stand along product or be part of a PACS or other radiology platform solution)**

Radiation doses for procedures in Belfast Trust's Imaging Departments are archived to the Picture Archiving and Communications System (PACS) for all studies. Doses are also manually entered into the Radiology Information System (RIS) for radiological studies.

- 2. If so, is it a commercially available system or a system free of cost to use?**

Modalities are configured to archive to the PACS on all sites. There is no separate dose recording / management system in use.
