Ovarian Cancer Treatment

How many ovarian cancer patients (any stage) have been treated in the last 3 months with:

- Paclitaxel in combination with a platinum-based compound 34
- Platinum-based therapy alone (cisplatin or carboplatin) 27
- Bevacizumab in combination with paclitaxel and carboplatin (with paclitaxel or nab-paclitaxel) 23
- Olaparib 19
- Olaparib + Bevacizumab <5*
- Niraparib 51
- Rucaparib 6

Does your trust participate in any clinical trials for the treatment of ovarian cancer? If so, please provide the name of each trial along with the number of patients taking part

There is only one study open for ovarian patients at present.

The ModiFY Study: A phase 1/2, multicentre, open-label study of Modi-1 in patients with breast, head and neck, ovarian, or renal cancer

To date this study has recruited <5* patients, however none were to the ovarian cohort.

*Where numbers are low we have indicated <5 rather than give the exact figure. We feel that providing the exact figure has the potential to make people identifiable and so that information is exempt from release under Section 40(2) of the Freedom of Information Act 2000.
