Molecular diagnostic tests for cancer diagnosis

I am writing to request a comprehensive and up-to-date list of all molecular diagnostic tests used for cancer diagnosis that have been performed externally over the last three years, meaning tests sent to specialist laboratories or companies outside the Trust.

For all cancer-related molecular diagnostic assays referred externally during this period; across Molecular Pathology, Cellular Pathology, Haematology, and any other relevant departments—please provide the following information:

- Test name and clinical indication**
- Receiving laboratory or external provider**
- Technology or methodology used (e.g., NGS, PCR, IHC, FISH, ctDNA)**
- Accreditation or regulatory status, including whether the test is UKAS-accredited or CE-marked**

Please refer to the following attachments:
