Peptide Research

This workbook supports a two-stage information-gathering exercise. First identify which authorities hold relevant records. Then seek detailed information only for positive matches. It does not request clinical advice, dosage information, new scientific analysis or speculative opinions.

1. Use the FOI Contact Tracker to record each authority and its verified official contact route.
2. Send the focused request in FOI Request Template, addressed individually to each authority.
3. Ask authorities to identify only substances for which relevant recorded information is held.
4. Record acknowledgements, deadlines and outcomes in the tracker.
5. Copy positive results into Peptide Research Schedule and record the responding organisation and response date.
6. Use a follow-up request only where a positive match requires further detail.

The list includes peptides and some related compounds commonly discussed alongside peptides. Recipients should search using names, aliases and study identifiers where their systems permit. Authorities are asked only for information already held.
