Calcium Scoring Cardiac CT PIL

CALCIUM SCORING CT PATIENT INFORMATION LEAFLET

This leaflet aims to answer your questions about having a calcium scoring cardiac (heart) CT scan. It explains what will happen when you have the scan, the benefits, risks and alternatives.

What is a Calcium scoring Cardiac CT scan?

Computed Tomography, more commonly known as a CT scan, is a diagnostic imaging examination which produces multiple images inside the body.

The CT system uses sophisticated computer analysis to provide detailed 3-dimensional images of your moving heart and major blood vessels, for example coronary arteries.

Calcium deposits can be identified and the CT scanner can use a special software programme to produce a your "Calcium score" from information received from the CT scan.

A higher coronary calcium-score suggests you have a higher chance of significant narrowing in the coronary arteries and a higher risk of future heart attack.

What should I do before I come for my scan?

Individuals of child bearing age

If you are of childbearing age and have regular periods, you must ensure the scan is within 10 days of the first day of your last menstrual period. Please call the department if you need to reschedule your scan, or if you think you may be pregnant.

Checklist for the day of your scan

Do not

Do not drink any products which contain caffeine. No coffee, tea or cola from midnight before the scan

Do	Eat normally			
	Allow yourself enough time to be in the department for 30 minutes			
	Bring a list of the medicines you are taking			
	Tell us if you have had an allergic reaction to iodine			
	Tell us if you think you are pregnant			
	Leave plenty of time to arrive at appointment early (RVH carpark queues can get very busy)

What happens during the scan?

We want to involve you in decisions about your care and treatment. If you decide to go ahead, you will be asked to sign a consent form. This states that you agree to have the treatment and you understand what it involves. If you would like more information about our consent process, please speak to a member of staff caring for you.

When you arrive we will introduce ourselves and explain the procedure. We will:

- 1. Ask you to fill in a short pre-scan checklist and sign the consent form.
- 2. Ask you to change into a hospital gown.
- 3. A health care assistant (HCA) will record observations such as heart rate and blood pressure (BP) before and after your scan.

You will need to lie on a motorised bed. This moves slowly through the circular opening of the machine called a gantry. The scanner is a 'doughnut' shaped and not a tunnel. Four electrodes (small, sticky dots) will be placed on your chest and attached to an electrocardiograph (ECG) machine. We will help position you on the bed for about 10 minutes and ask you to:

- 1. Raise your arms above your head and lie very still during the scan.
- 2. Hold your breath for about 10 seconds during scanning. Please note that motion from breathing or body movement may result in blurring of the images.
- 3. A sophisticated computer program, guided by the Supervising Radiologist, then analyses the images for presence of calcification within the coronary arteries.
 - Absence of calcium is considered a "negative" exam. It does not exclude the presence of "soft" non-calcified plaque.
 - If calcium is present, the computer will create a calcium score that estimates the extent of coronary artery disease.

We will try to keep to your appointment time but occasionally we have to scan patients urgently at short notice. We will let you know if your appointment is delayed.

What happens after the scan?

On completion of the examination you will be shown back to the changing cubicle where you can get dressed again and then you are free to leave the department.

You can now eat and drink as normal and continue about your normal daily activities.

When will I get the results?

Your scan will be interpreted by a Consultant Radiologist and a written report sent to your referring doctor. It is the responsibility of your referring consultant to issue your results. You

Calcium Scoring Cardiac CT PIL

should receive your results within 4 weeks. If you have concerns regarding results, please contact your referring consultant or referring consultant's secretary.

What are the risks?

CT scans use radiation. In our modern scanner, the level of radiation used is small and the benefits of the scan are believed to outweigh any risks.

Most people undergo a calcium scoring cardiac CT scan with no adverse effects.

What are the benefits?

Calcium scoring CT scans are fast and non-invasive. They are a useful way of detecting calcium deposits in the coronary arteries.

Will I feel any pain?

You should not feel any pain during the scan. The most difficult part is keeping still. Try to relax as much as possible. If you find it uncomfortable to lie still then please tell the radiographer who will help you.

What to do if you do not want to have the scan.

Please call the CT department on the telephone number below to cancel, so we can offer your appointment to someone else.

Image sharing

Your images will be electronically stored on the hospital picture archiving system. This data can be accessed throughout the Belfast Health and Social Care Trust and other doctors and health care professionals who are directly involved in your care. The ability to share images and radiological reports will improve the safety and quality of your care by ensuring that the right information is available in the right place at the right time.

In order to improve the medical services we provide we may also use your data as anonymously as possible for internal audit and medical education. If you would prefer that your data is not used for these purposes, please inform a member of staff when you attend for your examination.

If your data is to be used for research, then a separate consent process will be used. You will be asked for your consent, should this be the case.
